As Linux on System z becomes more prevalent and mainstream in the industry, the need for it to deliver higher levels of availability is increasing. This IBM Redbooks publication starts with an explanation of high availability (HA) fundamentals such as HA concepts and terminology. It continues with a discussion of why a business needs to consider an HA solution and then explains how to determine your business single points of failure. We outline the components of a high availability solution and describe these components. Then we provide some architectural scenarios and demonstrate how to plan and decide an implementation of an end-to-end HA solution, from Linux on System z database scenarios to z/OS, and include storage, network, z/VM, Linux, and middleware. This implementation includes the IBM Tivoli System Automation for Multiplatforms (TSA MP), which monitors and automates applications distributed across Linux, AIX®, and z/OS® operating systems, as well as a GDPS based solution. It includes the planning for an end-to-end scenario, considering Linux on System z, z/VM, and z/OS operating environments, and the middleware used. The TSA MP implements HA for infrastructure, network, operating systems, and applications across multiple platforms and is compared to a Linux HA implementation based on open source Linux-HA, which is Linux only. This comprehensive guide captures important trends in international relations (IR) pedagogy, paying particular attention to innovations in active learning and student engagement for the contemporary International Relations IR classroom. InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects. This report presents the findings of a research program designed to: a) evaluate current door observation practices and procedures and assess how they relate to transit property characteristics, such as facilities, vehicle configurations, and operating procedures; b) identify the range and scope of existing observation aids and assess their merits relative to their specific applications; c) identify promising observation technologies and define conceptual observation aids based on them; and d) develop guidelines for transit system use in the selection and implementation of observation aids for their specific application. This Standard is applicable to the determination of nitrogen oxide in the stationary source emission. This comprehensive guide from the editors of Popular Science covers everything a new inventor needs

to know from starting out to running a start-up. Contrary to popular opinion, you don't have to be an ace electrician or a coding prodigy to develop your own game-changing invention. All you need is curiosity, a desire to fix a common problem, and the determination to see your ideas become reality. And it won't hurt to have this book handy—a volume full of vital tips, skills, and strategies that will take you from zero to inventor. Everyone knows about Bill Gates or Steve Jobs, but in *The Total Inventor's Manual*, you'll also learn from the examples of those intrepid inventors who gave us the first home pregnancy test, the Super Soaker, the Roomba, the digital camera, and many other products that have changed the world. Here you will learn to turn your vision into a reality with a crash course in ideation, prototyping, and testing—including lessons in 3D-printing, coding, robotics, and more. You'll discover funding strategies that range from running a Kickstarter campaign to making a venture capital pitch, plus tips on manufacturing, supply chains, marketing, and running—or selling—your new company! In this book the authors relate and discuss the idea that perceptual processes can be considered at many levels. A phenomenon that appears at one level may not be the same as a superficially similar phenomenon that appears at a different level. For example "induced motion" can be analyzed in terms of eye movements or at the retinal level or at a much higher cognitive level: how do these analyses fit together? The concept of levels also makes us think of the flow of information between levels, which leads to a consideration of the roles of top-down and bottom-up (or feed-forward, feed-back) flow. There are sections devoted to vestibular processing, eye movement processing and processing during brightness perception. The final section covers levels of processing in spatial vision. All scientists and graduate students working in vision will be interested in this book as well as people involved in using visual processes in computer animations, display design or the sensory systems of machines. A reference handbook detailing CNC machining centers, commonly used CNC commands, and related production tooling. Written for programmers, engineers, and operators, the reference supplies basic theory and procedures covering milling, boring, turning, grinding, and CNC tooling. The CNC commands are referenced by graphical representation of the toolpath, and generic commands are cross-referenced by industry standard formats. Includes illustrations. Lacks an index. Annotation copyright by Book News, Inc., Portland, OR Comes with a CD-ROM packed with a variety of problem-solving projects. A comprehensive resource that explores electromagnetic compatibility (EMC) for aerospace systems *Handbook of Aerospace Electromagnetic Compatibility* is a groundbreaking book on EMC for aerospace systems that addresses both aircraft and space vehicles. With contributions from an international panel of aerospace EMC experts, this important text deals with the testing of spacecraft components and subsystems, analysis of crosstalk and field coupling, aircraft communication systems, and much more. The text also includes information on lightning effects and testing, as well as guidance on design principles and techniques for lightning protection. The book offers an introduction to E3 models and techniques in aerospace systems and explores EMP effects on and technology for aerospace systems. Filled with the most up-to-date information, illustrative examples, descriptive figures, and helpful scenarios, *Handbook of Aerospace Electromagnetic Compatibility* is designed to be a practical information source. This vital guide to electromagnetic compatibility: • Provides information on a range of topics including grounding, coupling, test procedures, standards, and requirements • Offers discussions on standards for aerospace applications • Addresses aerospace EMC through the use of testing and theoretical approaches Written for EMC engineers and practitioners, *Handbook of Aerospace Electromagnetic Compatibility* is a critical text for understanding EMC for aerospace systems. Situated in the conning tower, the Torpedo Data Computer Mark III was the standard fire control device used by U.S. Navy submarines during the first half of WWII. An electro-mechanical, analog computer, the TDC provided fire control solutions through a variety of inputs, including submarine course and speed, estimated target course, speed and range, and torpedo type in use. Originally printed by the Arma Corporation and the U.S. Navy, this Mark 3 manual provides a fascinating glimpse inside this mechanical wonder. Please note, due to quality issues with the original document, some pages may be slightly sub-standard. Care has been taken to preserve the integrity of the original text.
