Endorsed by the Australian College of Critical Care Nurses (ACCCN) ACCCN is the peak professional organisation representing critical care nurses in Australia Written by

leading critical care nursing clinicians, Leanne Aitken, Andrea Marshall and Wendy Chaboyer, the 4th edition of Critical Care Nursing continues to encourage and challenge critical care nurses and students to develop world-class practice and ensure the delivery of the highest quality care. The text addresses all aspects of critical care nursing and is divided into three sections: scope of practice, core components and specialty practice, providing the most recent research, data, procedures and guidelines from expert local and international critical care nursing academics and clinicians. Alongside its strong focus on critical care nursing practice within Australia and New Zealand, the 4th edition brings a stronger emphasis on international practice and expertise to ensure students and clinicians have access to the most contemporary practice insights from around the world. Increased emphasis on practice tips to help nurses care for patients within critical

care Updated case studies, research vignettes and learning activities to support further learning Highlights the role of the critical care nurse within a multidisciplinary environment and how they work together Increased global considerations relevant to international context of critical care nursing alongside its key focus within the ANZ context Aligned to update NMBA RN Standards for Practice and NSQHS Standards Includes subject section, name section, and 1968-1970, technical reports. This book covers various aspects of gall bladder cancer, e.g. its epidemiology, etiology, pathology, clinical presentation, diagnosis, investigations, staging, management, prevention, etc. Gall bladder cancer is the most common form of biliary tract cancer worldwide, there are peculiar geographical variations in its incidence; while it is rare in the developed west (North America and Western Europe), high incidence rates are reported from Central and South

America, Central and Eastern Europe, East Asia (Japan and Korea) and northern India. In addition, the book addresses a number of related issues including thick walled gall bladder, gall bladder cancer with surgical obstructive jaundice, incidental gall bladder cancer, the role and place of common bile duct excision, the Japanese aggressive surgical approach, management of asymptomatic gall stones, etc. An authoritative work that provides detailed insights into various aspects of gall bladder cancer and its management, the book offers a valuable resource for physicians in high-incidence areas and low-incidence areas alike. It is richly illustrated throughout with radiographs (US, CT, MRI, etc.) and operative and specimen photos. The area of automorphic representations is a natural continuation of studies in number theory and modular forms. A guiding principle is a reciprocity law relating the infinite dimensional automorphic

representations with finite dimensional Galois representations. Simple relations on the Galois side reflect deep relations on the automorphic side, called "liftings". This book concentrates on two initial examples: the symmetric square lifting from $SL(2)$ to $PGL(3)$, reflecting the 3-dimensional representation of $PGL(2)$ in $SL(3)$; and basechange from the unitary group $U(3, E/F)$ to $GL(3, E)$, $[E : F] = 2$. The book develops the technique of comparison of twisted and stabilized trace formulae and considers the "Fundamental Lemma" on orbital integrals of spherical functions. Comparison of trace formulae is simplified using "regular" functions and the "lifting" is stated and proved by means of character relations. This permits an intrinsic definition of partition of the automorphic representations of $SL(2)$ into packets, and a definition of packets for $U(3)$, a proof of multiplicity one theorem and rigidity theorem for $SL(2)$ and

for $U(3)$, a determination of the self-contragredient representations of $PGL(3)$ and those on $GL(3, E)$ fixed by transpose-inverse-bar. In particular, the multiplicity one theorem is new and recent. There are applications to construction of Galois representations by explicit decomposition of the cohomology of Shimura varieties of $U(3)$ using Deligne's (proven) conjecture on the fixed point formula. Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information

needed to guide societies to a truly sustainable world by 2050. GEO-6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future - emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core. This book provides a comprehensive update on recent developments of Jasmonates (JAs) and Brassinosteroids (BRs) in plant signalling and biotechnological applications. Over the last few decades, an enormous amount of research data has been generated on these two signalling molecules. This valuable compilation will enhance the basic understanding of JAs and BRs mechanism of actions ensuing tolerance mechanism of crops under climate changes for

sustainable agriculture and human welfare. This book covers topics regarding the occurrence of JAs and BRs in plants, biosynthesis, role in plant growth and development, role of these PGRs during various abiotic stress tolerance in plants, crosstalk of Reactive Oxygen Species (ROS) and plant stress mitigation, regulation of JAs and BRs signaling pathways by microRNA, along with physiological and anatomical roles of JAs and BRs as wound healing, regeneration and cell fate decisions. The cross talk of JAs and BRs with neurotransmitters in plant growth and development. Bio-fortification of crop plants with BRs in managing in human health issues chapter enlightened new role of BRs in human wellbeing. This book will be beneficial to scientists, researchers, agriculturists, horticulturists, industries related to the crop and food production **KEY FEATURES** Reviews the global scientific literature and experimental data of the authors on the

occurrence of JAs and BRs in various plants Update information on recent developments of JAs and BRs signalling and biotechnological applications in plants Highlights the physiological, metabolic and molecular mechanism of JAs and BRs under variable climates Addresses the abiotic and biotic tolerance management by JAs and BRs Describes the role of JAs and BRs in sustainable agriculture and human welfare in eco-friendly manner Reprint of the original, first published in 1861. 1400+ Q&As and a test-simulating CD deliver unmatched preparation for the radiography certification/recertification exam 4 STAR DOODY'S REVIEW! "This is an excellent resource for radiography student interns to use to prepare for the national registry. It poses a series of questions from each integral portion of radiography and covers all the units thoroughly....This is a wonderful resource for students to use to fully prepare

for the exam....This is the best book around to prepare interns for the exam."--Doody's Review Service LANGE Q&A: Radiography Examination, 8th Edition provides radiography students and recertifying radiographers with more than 1,400 registry-style questions with detailed answer explanations. Questions are organized by topic area for focused study and the book also includes two comprehensive practice exams. This new eighth edition includes the ARRT examination content to be implemented in January 2012. Also new is coverage of computed tomography (CT) technology within the chapters on radiation protection, equipment, procedures, and CT imaging. Also included is an exam-simulating CD containing two complete practice exams. Features Sections include Patient Care, Radiographic Procedures, Radiation Protection, Image Production and Evaluation, and Equipment Operation and Maintenance Written by an author with more

than 35 years teaching experience Each question includes detailed explanation of correct and incorrect answer options Companion CD features one complete practice exam The scientific and practical interest in coronands (crown ethers), cryptands, podands as complexing agents for cations as well as for anions and neutral low molecular species is undeniable 1,2). The chemistry of crown compounds is steadily increasing. About 250 original papers dealing with crown chemistry appeared only in 1980. New molecules with crown ether properties are constantly synthesized and new applications discovered. Owing to lack of space, only a small number of the original publications is mentioned here. Thus, in the literature compilation only some, but relevant works are selected for each chapter. Whenever possible, reference is made to reviews or review-like articles alone by means of which original works can be consulted. The reviews given under ref. 1) are considered to

be the most relevant. The formulae presented in the figures should be understood as representative structures outlining a specific field. 2 Classification of Oligo-/Multidentate Neutral Ligands and of their Complexes Today, a distinction is made between the classical ring oligoethers (crown ethers) and monocyclic coronands, oligocyclic spherical cryptands and the acyclic podands with respect to topological aspects 3). This classification and the topology are illustrated in Fig. 1, each figure representing the minimum number of donor atoms and chain segments characteristic of each class of compounds. Multidentate monocyclic ligands with any type of donor atoms are called coronands ("crown compounds"), while the term crown ether should be reserved for cyclic oligoethers exclusively containing oxygen as donor atom. The legendary overland silk road was not the only way to reach Asia for ancient travelers from the Mediterranean. During the

Roman Empire's heyday, equally important maritime routes reached from the Egyptian Red Sea across the Indian Ocean. The ancient city of Berenike, located approximately 500 miles south of today's Suez Canal, was a significant port among these conduits. In this book, Steven E. Sidebotham, the archaeologist who excavated Berenike, uncovers the role the city played in the regional, local, and "global" economies during the eight centuries of its existence. Sidebotham analyzes many of the artifacts, botanical and faunal remains, and hundreds of the texts he and his team found in excavations, providing a profoundly intimate glimpse of the people who lived, worked, and died in this emporium between the classical Mediterranean world and Asia. Reviewing an extensive array of procedures in hot and cold forming, casting, heat treatment, machining, and surface engineering of steel and aluminum, this comprehensive reference explores a vast range

of processes relating to metallurgical component design-enhancing the production and the properties of engineered components while reducing manufacturing costs. It surveys the role of computer simulation in alloy design and its impact on material structure and mechanical properties such as fatigue and wear. It also discusses alloy design for various materials, including steel, iron, aluminum, magnesium, titanium, super alloy compositions and copper. THE MOST COMPREHENSIVE BOOK EVER WRITTEN ON THE HETEROSEXUAL TRANSMISSION OF HIV FOR THE GENERAL PUBLIC. Over 50,000 scientific articles were reviewed to obtain the most applicable material. Information extracted from the scientific literature has been "translated" into a language anybody can understand. The book begins by covering all aspects of the sexual transmission of the AIDS virus, including the role of intravenous drug use in the

spread of infection. There are discussions on how rapidly the epidemic is spreading among heterosexuals, & the contribution of this spread by sexual contacts with prostitutes. The latter half of the book focuses on the issue of risk control to prevent infection. Detailed coverage of the most current preventive measures against HIV infection is provided, so the reader can more fully utilize the knowledge gained in the earlier chapters to protect himself or herself. The material presented is applicable to any sexually-active individual. However, emphasis has been directed towards persons of 16-25 years of age, where the epidemic is spreading uncontrolled. Main health care professionals (nurses, sex therapists, counseling psychologists, & clinical social workers, etc.) will also benefit from this compendium of important facts on AIDS, many of which have never been published.
