EnMasse is a simulation model based on Extend software and used in the analysis of alternative Jet Engine Intermediate Maintenance (JEIM) policies. The result of the policy analysis conducted using EnMasse is reported in a companion document, Supporting Expeditionary Aerospace Forces: Alternatives for Jet Engine Intermediate Maintenance, MR-1431-AF, 2002. The goal of the analysis was to evaluate several alternatives for accomplishing JEIM support. Closely allied to maintenance policy are the

maintenance structures within which these policies operate both in peace and war. This user's manual provides Member States implementing the IAEA Codes and Safety Guides (NUSS) with practical examples of management organization, good practices, methods and techniques for the maintenance of systems and components important to safety. Provides users of HPLC equipment with a comprehensive text for troubleshooting and maintaining HPLC systems. Describes how the chromatographer can maintain

the HPLC system in operating condition, what to look for and do to prevent and solve HPLC problems, and what can and should be done before calling a service representative.

Organized into chapters which basically represent the typical components of the HPLC system, with each chapter describing a basic element of the HPLC system in terms of maintenance and solving system problems. Arranged as a guide and working manual to help the chromatographer reduce instrument downtime, allowing for more efficiency and cost effectiveness in the HPLC laboratory. The Improved Performance Research Integration Tool

(IMPRINT) was developed by Alion Science and Technology for the Army Research Laboratory (ARL) Human Research and Engineering Directorate (HRED). This manual describes the professional version of IMPRINT, named IMPRINT Pro. IMPRINT Pro is government owned and consists of a set of automated aids to assist analysts in conducting human performance analyses. IMPRINT Pro provides the means for estimating manpower, personnel, and training (MPT) requirements and constraints for new weapon systems very early in the acquisition process. By

allowing the incorporation of robust task analyses and associated data into a dynamic simulation environment, IMPRINT enables analysts to quantitatively predict the impact of human systems integration (HSI) variables (manpower, personnel, training, and human factors based interface design) against total system performance. This paper provides the basis for the preparation of manuals necessary for managers and staffs to perform needed activities at the proper time. The guide provides a comprehensive list of issues that should be addressed in operation and maintenance manuals for irrigation and

drainage systems, and a listing of published materials and working papers which will assist in the formulation of plans for operation and maintenance. The paper serves as a valuable tool to help improve the performance of irrigation and drainage systems and to assist managers in developing and improving effective organizations to serve water consumers better. A step-by-step guide to creating accurate, comprehensive, and easy to understand operations and maintenance manuals. From defining the audience to producing a hardcopy or online manual, the author draws on his years of experience to explain the process from start

to finish. This guide is required reading for the facility operator, maintenance technician, training coordinator, and manager; those who must have the necessary tools and information to create O&M manuals that are clear, concise, and written at the level of the staff involved in the day-to-day operations and maintenance of the facility. This book, which includes valuable sample manual sections, covers such topics as overall organization, defining the level of detail, standard operating procedures, developing a style guide, developing HTML-based manuals, and placing and viewing CAD drawings online.

It also includes procedures for how to conduct and record purchases with a purchasing card, as well as reconcile the month-end purchasing card statement. A complete document management manual that includes forms for document withdrawals and document destruction, as well as procedures for indexing, storage of regular, permanent, and confidential documents, retrieval, destruction, and storage layout. New

procedures to address the timekeeping, payroll processing, and pay distribution requirements of a state-of-the-art payroll system. The OSAMM is designed to simultaneously optimize support and maintenance policies for new equipment. Inputs to the model are limited to the types of information that should be available early in development when the maintenance concept is being formulated. The model determines optimal maintenance task distribution and replacement task distributions for the major items in equipment. It also compares the cost of throwing away an item with the cost of

repairs. In making these decisions the model considers the spares, special test equipment and special repairmen that will be needed to support the maintenance policy. Other costs such as transportation, cataloging and documentation are also considered. Release 2.0 contains three run modes, one of which accepts up to three different options for each repair action. The improved model is able to trade-off among three repair methods. This capability can be used to analyze such repair actions as common, automatic, and special test equipment to determine how repair should be done as well as where it

should be done. The original model remains as one of the run modes of the enhanced model, however. This the user's guide gives a brief description of the model, defines the inputs required, and explains the output. It also contains a chapter which describes the various types of sensitivity analyses that can be performed using the model. Keywords: LORA(Level of Repair Analysis); Optimal allocation; Multipurpose test equipment. Your company is now on SAP S/4HANA--so how do you run your plant maintenance operations on this new system? Between these pages, you'll find the detailed, step-by-step instructions you need for your

The Engine Maintenance System Evaluation (EnMasse) assesses the effect of different policies, such as centralization, on jet engine intermediate maintenance. This user's guide to EnMasse, a simulation model developed by the authors, describes the processes (module shop, test cell, etc.) in the model. Users can track the engine operation and maintenance process from the flightline through various shops and back. The report delineates essential components of EnMasse that might be employed or modified to model

various choices of engine types and maintenance policies. "The research reported was conducted under a project entitled 'Traffic Control System Hardware Reliability'. The project had two principal goals. First, traffic signal maintenance records systems maintained by nine jurisdictions were reviewed to determine the nature and extent of signal maintenance problems and to establish the requirements of an automated system. The second goal was to develop an automated system which fulfilled the requirements identified. The work tasks consisted of a review of existing signal maintenance record systems,

analysis of maintenance data, automated maintenance record system design, system development, and pilot testing the system at two jurisdictions. This volume presents installation and operating instructions for the system"-- Technical report documentation p. The HCR (Harvest Cost-Revenue) Estimator is engineering and financial analysis software used to evaluate stand-level financial thresholds for harvesting small diameter ponderosa pine (*Pinus ponderosa* Dougl. ex Laws.) in the Southwest United States. The Windows-based program helps contractors and planners to identify costs associated with tree selection, residual

handling, transportation of raw materials, and equipment used. Costs are compared against total financial return for regionally based market opportunities to arrive at potential net profit. Information is used to identify per-acre cost thresholds, for contract appraisal, and for prioritizing project planning for wildfire fuel reduction treatments and forest restoration efforts.
