This volume offers an overview of the latest research on perinatal adaptation among women who have faced trauma, loss and/or adversity, both in childhood and/or as an adult, and describes the varied trajectories of adaptive and maladaptive coping that follow. The range of outcomes considered span from health-limiting (e.g. mental illness, substance use, unhealthy life style behaviours) to health-promoting (e.g. resilience and posttraumatic growth). These outcomes are examined both in relation to mothers' experience of motherhood and parenting, and with regard to their children's lives. Interpersonal trauma, experienced in childhood and/or adulthood, can have a profound effect on how women experience the transition into motherhood - from pregnancy, to childbirth, and postpartum caregiving. Women across the globe are exposed to high rates of interpersonal violence, and face the physical and emotional consequences of such events. The shift into motherhood is an emotionally evocative period in a woman's life, entailing not only challenges, but also the potential for healing and growth. Individual chapters will present state-of-the-art research, and will also highlight the voices of women who have personally experienced trauma, illustrating the effects on their experiences as mothers. Developed by the National Association of Emergency Medical Technicians (NAEMT) in cooperation with the American College of Surgeons Committee on Trauma (ASC-COT), *PHTLS for First Responders, Second Edition* reflects current, evidence-based knowledge and practice, and promotes critical-thinking as the foundation for providing quality care. Rapidly assessing a trauma patient to identify life-saving care is at the heart of *PHTLS for First Responders, Second Edition*. It takes 2 minutes or less for a patient to exsanguinate. No other intervention first responders perform is more important than stopping that level of bleeding in trauma patients. To reflect this, *PHTLS for First Responders, Second Edition* utilizes the XABCDE patient assessment mnemonic to place exsanguinating hemorrhage at the forefront of every patient encounter. The importance of XABCDE (eXsanguinating hemorrhage, airway, breathing, circulation, disability, and expose/environment) is reinforced in every clinical chapter. *PHTLS for First Responders, Second Edition* features a new course manual, which reinforces and clarifies key concepts from the course; features an engaging, interactive design; and is written so you feel like you are participating in a conversation, versus listening to a lecture. The vision and development of this edited text are driven by a deep desire to ensure that teacher candidates are thoughtfully prepared to more fully address students' needs and create classroom environments that are safe for students and teachers. Specifically, this text will provide an understanding of how educator preparation programs are providing teacher candidates with the knowledge and skills to effectively utilize an asset-based approach to foster resiliency skills that support P-12 students who have or are experiencing trauma. This text considers how programs are developing equity-focused content, curriculum, & pedagogy to ensure teacher candidates can integrate trauma-informed practices as well as develop

their own resiliency skills. This resource highlights important and relevant tools, strategies, and approaches for preparing future teachers to implement traumainformed practices within their classrooms. In recent years, much attention and resources focused on preparing teachers to more comprehensively address, acknowledge, and understand childhood trauma and the impact it has on students' lives inside and outside of the classroom. This text will be of interest to all those working in institutes of higher education, alternative licensure programs, and organizations, public schools, and districts involved with the preparation of teachers and/or professional development of in-service educators. It has the potential to serve as a catalyst for teacher preparation programs to more intentionally integrate trauma-informed practices in meaningful ways and contribute to a glaring gap within the literature focused on the systematic ways in which childhood trauma and resiliency development are being addressed in the preparation of teachers.
