**Modeling Play in Early Infant Development** Oct 16 2021 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

*Climate Risk and Resilience in China* Apr 09 2021 China has been subject to floods, droughts and heat waves for millennia; these hazards are not new. What is new is how rapidly climate risks are changing for different groups of people and sectors. This is due to the unprecedented rates of socio-economic development, migration, land-use change, pollution and urbanisation, all occurring alongside increasingly more intense and frequent weather hazards and shifting seasons. China's leadership is facing a significant challenge – from conducting and integrating biophysical and social vulnerability and risk assessments and connecting the information from these to policy priorities and time frames, to developing and implementing policies and actions at a variety of scales. It is within this challenging context that China's policy makers, businesses and citizens must manage climate risk and build resilience. This book provides a detailed study of how China has been working to understand and respond to climatic risk, such as droughts and desertification in the grasslands of Inner Mongolia to deadly typhoons in the mega-cities of the Pearl River Delta. Using research and data from a wide range of Chinese sources and the Adapting to Climate Change in China (ACCC) project, a research-to-policy project, this book provides a fascinating glimpse into how China is developing policies and approaches to manage the risks and opportunities presented by climate change. This book will be of interest to those studying global and Chinese climate change policy, regional food, water and climate risk, and to policy advisors.

**Educational Neuroscience, Constructivist Learning, and the Mediation of Learning and Creativity in the 21st Century** Mar 09 2021 The advent of educational neuroscience, a transdisciplinary exercise emerging from cognitive neuroscience and educational psychology, is the examination of physiological processes that undermine, support, and enhance the capacities to learn and create. The physiological underpinnings of learning and creativity each impact human ability and performance and mediate the processes of becoming educated, expert, and valued. Evidence of learning provides support to an ongoing canon, process, system, field or domain, while evidence of creativity results in an elaboration or departure from an ongoing canon, process, system, field, or domain. Educational neuroscience extends a challenge to scholars from multiple contexts to engage in the characterization and exploration of human ability and performance in these realms. The role of context, both environmental and interoceptive, is an integral part of efforts in educational neuroscience and in theories of constructivist learning to contribute ecologically valid insight to the pragmatic processes of learning and creativity. Examination at this level of specificity is vital to our ability to educate and support human potential in the 21st century. This Research Topic examines the neural basis of cognitive states and processes that influence knowledge and skill acquisition tied to the demonstration of human ability and performance across individual differences and in multiple contexts including STEM learning and the arts.

*Principles of Gender-Specific Medicine* Jul 13 2021 Awarded with the 2018 Prose Award in Clinical Medicine, the third edition of Principles of Gender-Specific Medicine explored and described exciting new areas in biomedicine that integrated technology into the treatment of disease and the augmentation of human function. Novel topics such as the sex-specific aspects of space medicine, the development and the use of genderized robots and a discussion of cyborgs were included in the third edition, providing a preview of the expanding world of sex-specific physiology and therapeutics. This Fourth Edition is a continuation of the mission to trace the relevance of biological sex to normal function and to the experience of disease in humans. We are now twenty years into the postgenomic era. The investigation of how the genome produces the phenome has led to fascinating insights as well as yet unanswered questions. Principles of Gender-Specific Medicine, Fourth Edition, has a central theme: discuss advances in understanding the role of epigenetics in regulating gene expression in a dynamic, sex-specific way during human life. It explores the protean role of epigenetics in human physiology, the relevance of environmental experience to human function, the therapeutic promise of cutting-edge methodologies like gene manipulation, the preparation of humans for space travel, the use of artificial intelligence in detection and therapeutic decisions concerning disease states, the possibilities for technological support of not only compromised individuals but of the augmentation of human function, and an analysis of the benefits, limitations and issues that surround our current expectations of personalized medicine. Covers the most important developments in biomedical research in the past decade, with a thoughtful analysis of how they impact patient care Discusses the feasibility and usefulness of personalized medicine, the limits and promise of genetic editing, the basis for variation in sexual identity and how artificial intelligence and technology will affect basic human function as well as correcting disability Promotes and facilitates discussions about the ethics and governance issues that surround much of what science is now able to do at the most basic levels of human's physiology

*Architects' Data* Jul 01 2020 An indispensable tool for the beginning stages of designing and planning a building project This new edition of a classic, bestselling text provides, in one concise volume, the essential information needed to form the framework for the more detailed design and development of any building project. Organized largely by building type, it covers planning criteria and considerations of function and siting—and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most of the featured illustrations are dimensioned and each building type includes plans, sections, site layouts, and design details. The book also includes an extensive bibliography and detailed set of metric/imperial conversion tables. Architects' Data starts with the basics of designing for a new building project, before moving on to covering everything an architect needs to know. It also looks at the design styles and specifications for creating different types of structures, such as those made for residential, religious, cultural, sports, medical, and other types of occupation. Covers user requirements, planning criteria, basic dimensions, and considerations of function and siting Includes numerous examples and over 6200 illustrations and tables 5th English edition of the classic, international reference for architects Architects' Data is an excellent resource for architects, building surveyors, space planners, and design and build contractors everywhere.

*Towards an embodied science of intersubjectivity: Widening the scope of social understanding research* Nov 16 2021 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition. This problem is understood as how we figure out other minds, relying only on indirect manifestations of other people's intentional states, which are assumed to be hidden, private and internal. Research on this question has mostly investigated how individual cognitive mechanisms achieve this task. A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes. This interactive expansion of the conceptual and methodological toolkit for investigating social cognition, we now propose, can be followed by an expansion into wider and deeply-related research questions, beyond (but including) that of social cognition narrowly construed. Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds. These phenomena include acting and perceiving together, verbal and non-verbal engagement, experiences of (dis-)connection, management of relations in a group, joint meaning-making, intimacy, trust, conflict, negotiation, asymmetric relations, material mediation of social interaction, collective action, contextual engagement with socio-cultural norms, structures and roles, etc. These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research. We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena. This Research Topic aims to investigate relations between these different issues, to help lay strong foundations for a science of intersubjectivity – the social mind writ large. To contribute to this goal, we encouraged contributions in psychology, neuroscience, psychopathology, philosophy, and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive, from observational to participatory.

**Monitoring and Evaluation of Climate Change Adaptation: A Review of the Landscape** Feb 05 2021 Monitoring and evaluation (M&E) of climate change adaptation (CCA) poses an assortment of thorny methodological challenges. Individually, none are unique to CCA, but together they represent a very distinctive conundrum facing

practitioners and policy makers. Adding to this complexity further, climate change may be global in nature but its impacts, and how we respond to them through adaptation efforts, cut across scales, sectors, and levels of intervention. As investments in climate adaptation increase, organizations are seeking to measure, assess and understand an array of adaptation initiatives, and derive learnings to inform policy and praxis. This issue presents findings from many of the most important contemporary CCA program evaluation research initiatives. The chapters represent the most coherent and current collection of CCA M&E research in this emerging and important field, written by many of its leading experts. Filled with examples and insights in formulating coherent responses to methodological challenges, it will be of interest to M&E scholars and practitioners globally. This is the 147th issue in the New Directions for Evaluation series from Jossey-Bass. It is an official publication of the American Evaluation Association.
