A thorough and timely update, this new edition presents principles, techniques, and applications in this sub-discipline of analytical chemistry for quantifying traces of potentially toxic organic and inorganic chemical substances found in air, soil, fish, and water, as well as serum, plasma, urine, and other body fluids. The author addresses regulatory aspects, calibration, verification, and the statistical treatment of analytical data including instrument detection limits; quality assurance/quality control; sampling and sample preparation; and techniques that are used to quantify trace concentrations of organic and inorganic chemical substances. Key Features: Fundamental principles are introduced for the

more significant experimental approaches to sample preparation Principles of instrumental analysis (determinative techniques) for trace organics and trace inorganics analysis An introduction to the statistical treatment of trace analytical data How to calculate instrument detection limits based on weighted least squares confidence band calibration statistics Includes an updated series of student-tested experiments The book rethinks the means of harmonization of prima facie norm conflicts in light of the multitude of international agreements across regimes. The methodology deployed in this book, which is referred to as complementation or complementary application, represents a novel approach by focusing on commonly shared objectives and a unifying ordre public transnational across fields of public international law that allow for a harmonization beyond traditional treaty interpretation. Fields of public international law, mainly the laws of armed conflict, international environmental law, and

human rights law, apply simultaneously to questions regarding the environment and war. Such a coexistence challenges the unity of the international legal order, and it also challenges the means of harmonization across fields of public international law. However, eventually, the co-existence of several fields of public international law can result in a refinement of international law and enhanced legal protection. Diversification can also contribute to clarification or normative intensification in areas of parallel application of various fields and multilayered legal protection, demonstrating a counter-option to fragmentation. This volume contains, for each aspect of international humanitarian law, a summary of the relevant treaty law and relevant state practice including legislation, military manuals, case-law and official statements, as well as practice of international organisations, conferences and judicial and quasi-judicial bodies. It offers a comprehensive overview of what current or past

practice has been in the chosen representative countries around the world. This original and authoritative work is published by Cambridge in association with the ICRC and will be an essential reference work for anyone involved with international humanitarian law.
