Universal codes efficiently compress sequences generated by stationary and ergodic sources with unknown statistics, and they were originally designed for lossless data compression. In the meantime, it was realized that they can be used for solving important problems of prediction and statistical analysis of time series, and this book describes recent results in this area. The first chapter introduces and describes the application of universal codes to prediction and the statistical analysis of time series; the second chapter describes applications of selected statistical methods to cryptography, including attacks on block ciphers; and the third chapter describes a homogeneity test used to determine authorship of literary texts. The book will be useful for researchers and advanced students in information theory, mathematical statistics, time-series analysis, and

cryptography. It is assumed that the reader has some grounding in statistics and in information theory.

The environments are listed alphabetically. Each listing includes a general description of the conditions, a

comment on the corrosion characteristics of various alloys in such a situation, a bibliography of recent articles specific to the environment, tables consolidating and comparing corrosion rates at various temperatures and concentrations for various alloys, and graphical information. Also included are summaries on the general corrosion characteristics of major metals and alloys. The response of approximately 340 manufacturers of pneumatic components, from 622 contacted, has revealed that over 30 companies list items rated for pressures of 10,000 psi or greater and over 40 list items above 5000 psi. Several items are rated for 30,000, 60,000, 75,000, and 150,000 psi. Most of the components rated for 10,000 psi or greater pressures are miniature or designed for low volume flow. Approximately ten companies list large volume components rated for pressure of 10,000 psi. Information was requested on the following components: filters, relief valves, regulators, check valves, solenoid valves, hand valves, shutoff valves, and flex hose. However, other components have been listed, including those rated for 5000 psi or higher pressures. (Author).
