"If there is one quote from this book which deserves to be emblazoned on the opening pages of your Book

of Shadows; above the door of your house (or temple); and in every mind it is this: 'Wicca is not a place to go, it is a journey to take.'"—Spiral Nature For thousands of years, we have been told that God was a man. Then someone reminded us of when God was a woman. Now we have a reference for the sensible folk who have always felt that it takes two. If you have ever thought there was more to religion than ancient rituals performed for reasons unknown, this book will show you exactly what you have been looking for. If you have already come to the realization that Wicca is the religion for you, this book will help fill those many blanks that have been left by other books. Author A.J. Drew makes no attempt to dictate religious dogma or routine. He is quick to point out that the title does not start with the word the. He illustrates the many issues a person's religion should address and shows how he has been able to find answers to those issues through the practice of a modern religion that was based on some of the oldest principles of the ancient world. A Wiccan Bible takes you through the journey of life in three stages: • Maiden and Master: Creation, Wiccaning, and Self-dedication. • Mother and Father: Initiation, Handfasting/Handparting, and the Wheel of the Year. • Crone and Sage: Community, the world, and death. Mythology and science converge as the author details a life's journey into a religion with both old world ritual and new world science, fusing both into a creation myth which satisfies not only mind, but

soul as well. A Wiccan Bible not only shows a religious path filled with joy, but one that offers the ability to accept and manage sorrow. It is filled with ritual and with the reasons why ritual is fulfilling, rewarding, and a necessary part of everyday life. As A.J. addresses each issue, he demonstrates not only how he found the solutions in Wicca, and the many ways in which science and magick have helped him to do so. A Wiccan Bible also contains select recipes that the author has collected, including mixtures for incense, oils, and baths. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. 'Be prepared to be amazed' Guardian Can anyone get a perfect memory? Joshua Foer used to be like most of us, forgetting phone numbers and mislaying keys. Then he learnt the art of memory training, and a year later found himself in the finals of the US Memory Championship. He also discovered a truth we often forget: that, even in an age of technology, memory is

the key to everything we are. In Moonwalking with Einstein he takes us on an astonishing journey through the mind, from ancient 'memory palace' techniques to neuroscience, from the man who can recall nine thousand books to another who constantly forgets who he is. In doing so, Foer shows how we can all improve our memories. 'Captivating ... engaging ... smart and funny' The New York Times 'Delightful ... uplifting ... it shows that our minds can do extraordinary things' Wall Street Journal 'Great fun ... a book worth remembering' Independent 'A lovely exploration of the ways that we preserve our lives and our world in the golden amber of human memory' New Scientist This textbook bridges the gap between the sometimes overly simple VCR repair guides aimed at the average do-it-yourself and the highly technical manuals designed for use by experienced radio and TV bench technicians. Complete coverage includes both the "how's" and "why's" of maintaining VHS VCRs, as well as discussion of the practical aspects of interfacing with VCR repair customers. Everything from reading schematics, to use of test equipment, to tips for protecting the VCR and the technician during servicing are included. The reader-friendly style, supported by numerous photos and illustrations and a comprehensive glossary of acronyms and abbreviations, makes this book ideal for use by today's electronics students. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. Ever since television became practical in the early 1950s, closed-circuit television (CCTV) in conjunction with the light microscope has provided large screen display, raised image contrast, and made the images formed by ultraviolet and infrared rays visible. With the introduction of large-scale integrated circuits in the last decade, TV equipment has improved by leaps and bounds, as has its application in microscopy. With modern CCTV, sometimes with the help of digital computers, we can distill the image from a scene that appears to be nothing but noise; capture fluorescence too dim to be seen; visualize structures far below the limit of resolution; crisp images hidden in fog; measure, count, and sort objects; and record in time-lapsed and high-speed sequences through the light microscope without great difficulty. In fact, video is becoming indispensable for harnessing the fullest capacity of the light microscope, a capacity that itself is much greater than could have been envisioned just a few years ago. The time seemed ripe then to review the basics of video, and of microscopy, and to examine how the two could best be combined to accomplish these tasks. The Marine Biological Laboratory short courses on Analytical and Quantitative Light Microscopy in Biology, Medicine, and the Materials Sciences, and the many inquiries I

received on video microscopy, supported such an effort, and Kirk Jensen of Plenum Press persuaded me of its worth.
