Computer-Aided Design of Fluid Mixing Equipment Sep 18 2021 Computer-Aided Design of Fluid Mixing Equipment: A Guide and Tool for Practicing Engineers helps practicing design and operations engineers in solving their agitation and mixing problems. The book provides the practicing engineer with the tools necessary to evaluate the performance of existing agitation and mixing equipment, along with tactics on how to design new equipment using computerized rating and design methods. The most appropriate design techniques are also included in computer programs for solving mixing problems for the practicing engineer. Excel solutions are available through the WEB for 40 example problems in the book. WEB based, general purpose CalcEdge design programs are also available; the TK6 source codes are also available. Provides the practicing engineer with the tools necessary to evaluate the performance of existing equipment and to design new equipment using computerized rating and design methods Explains the principles required to understand and use recommended design methods Implements design methods that are readily available and easy-to-use

Presents sufficient worked examples—using provided canned programs—to guide the user in analyzing and designing mixing equipment

Luminescence and the Light Emitting Diode Apr 06 2023 Luminescence and the Light Emitting Diode: The Basics and Technology of LEDs and the Luminescence Properties of the Materials focuses on the basic physics and technology of light emitting diodes (LEDs) and pn junction lasers as well as their luminescence properties. Optical processes in semiconductors and the useful devices which can be made are discussed. Comprised of 10 chapters, this book begins with an introduction to the crystal structure and growth, as well as the optical and electrical properties of LED materials. The detailed fabrication of the LED is then considered, along with the luminescence of the material and the diode light emission. Subsequent chapters explore solid-state lasers made from LED materials; the equipment used to measure luminescence, cathodoluminescence, and diode electro-optic characteristics; and luminescence in gallium arsenide, GaAs_{1-x}P_x, and gallium phosphide. Other LED materials such as silicon carbide and ternary semiconducting compounds are also surveyed. The text concludes with a brief chapter that describes some of the applications of LEDs and LED products. This monograph will be of value to students and non-graduate engineers with an interest in LEDs.
