First published in 1991, this book presents a comprehensive annotated bibliography of radio broadcasting. Its eleven chapter-categories cover almost the entire range of radio broadcasting — with the exception of radio engineering due to its technical complexity although some of the historical volumes do encompass aspects, thus providing background material. Entries are primarily restricted to published books although a number of trade journals and periodicals are also included. Each entry includes full bibliographic information, including the ISBN or ISSN where available, and an annotation written by the author with the original text in hand. These manuals, published by the Olympic Broadcasting Services (OBS), were given to the broadcasters who attended the World Broadcaster Meetings in August 2013, July 2014 and September 2015. They contain detailed information regarding broadcasting at the Rio 2016 Olympic Games, including the following chapters: OBS organisation, production at the 2016 Rio Olympic Games, production plan by sport, International Broadcast Centre (IBC), venue infrastructure & operations, engineering & technical operations, broadcast telecommunications. For the first time, a construction of the history of early radio in the Philippines is attempted through the author's painstaking examination of archival records, extant publications, and private memorabilia as well as interviews with radio broadcasters of the time. Public broadcasters, like the BBC and the Italian broadcaster RAI, are some of the most important media organisations in the world. Politicians are often tempted to interfere in the workings of these broadcasters and when this happens, the results are highly controversial, as both the Blair and Berlusconi governments have discovered. Public Broadcasting and Political Interference explains why some broadcasters are good at resisting politicians' attempts at interference, and have won a reputation for independence – and why other broadcasters have failed to do the same. It takes a comparative approach of broadcasters in different countries, including the United Kingdom, Italy, Spain and Sweden arguing political independence for public service broadcasters is important because of its contribution to democracy allowing voters alternative sources of information which allow them to choose between electoral alternatives. The book will be of interest to be of interest to policy-makers, scholars and students of political communication, broadcasting and the media. These manuals, published by the Olympic Broadcasting Services (OBS), were given to the broadcasters who attended the World Broadcaster Meeting in Sochi in 2012 and 2013. Sochi was elected as the host city of the XXII Olympic Winter Games in 2007. Since that time, Olympic Broadcasting Services (OBS) has been working closely with Sochi 2014, the Organising Committee of the Olympic Winter Games, in all broadcast-related areas including the competition schedule, IBC, venues and technology. This Broadcaster Manual shows the results of this planning and preparation, presenting the current status of the OBS broadcast plan of the 2014 Olympic Winter Games. This book describes the operation of the radio studio in its most typical form around the world, and provides some detail of the equipment needed in the production process. On Friday, May 18, 1934, radio columns in the New York press announced that Bert Parks of CBS would be relinquishing his status as N.Y.'s youngest Network Staff Announcer to the newly appointed George Ansbro on the NBC Announcing Staff. Ansbro's successful audition led to a career that included work on Young Widder Brown, Manhattan Maharajah and Dr. I.Q., the television show from which the book's title line is taken. Fifty-five years after his broadcast beginning, he was hailed as a pioneer who in terms of service held the honor of being the oldest employee of any network. From his role as an NBC page in 1931 to his career as a network announcer, Ansbro recalls an era that includes a who's who of early radio and Hollywood stars, and a transition from what was known as the Blue Network and its beginnings at Rockefeller Center to the massive radio and television organization now known as ABC. Along with such names as Howard Cosell, Bob Hope, and Mary Pickford, Ansbro helped shape the modern entertainment world. This guide explores the climate-smart intensification of upland and lowland crop production systems in the dry-zone of Sri Lanka and provides technical guidance to achieve the productive objectives of selected strategic crops (as deemed relevant by the Government of Sri Lanka). The first edition focuses on maize and groundnut upland production systems and on rice lowland production. It provides a quick reference for information on crop production and soil management, including crop varieties, nutritional requirements and field equipment. As climate change will result in wider and more severe occurrences of plant pests, the guide relies on integrated pest management practices adapted to climate change. Optimizing the production of these crops calls for the diversification of crop systems using intercrops and cover crops. Additionally, sustainable mechanization is regarded as an essential agricultural production input to optimize labour and land productivity for the sustainable and profitable development of the agriculture sector. Therefore, the guide describes the innovative equipment needed for the sustainable optimization of crop production. To ensure coherent guidance and advice on sustainable farming practices, inputs and technologies, the guide has been developed in cooperation with all stakeholders working in the agriculture sector of Sri Lanka. These manuals, published by the Olympic Broadcasting Services (OBS), were given to the broadcasters who attended the World Broadcaster Meeting in July 2010 and July 2011. They contain detailed information regarding broadcasting at the London 2012 Olympic Games, including the following chapters: OBS organisation, production at the 2012 London Olympic Games, production plan by sport, International Broadcast Centre (IBC), venue infrastructure & operations, engineering & technical operations, broadcast telecommunications. New digital transmission systems are rapidly changing the broadcast industry and creating a demand for engineers who possess the proper technical skills. This comprehensive handbook explains DTV (digital TV) and DAR (digital audio radio) within the context of pre-existing radio and TV technologies, provides key equations and reference data used in the design, specification, and installation of broadcast transmission systems. These manuals, published by the Olympic Broadcasting Services (OBS), were given to the broadcasters who attended the World Broadcasting Meeting in March 2016 and February 2017. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1978. This book provides guidelines, tools, and real world examples to help assess and reform the enabling environment for media development that serves public interest goals. It builds on a growing awareness of the role of media and voice in the promotion of transparent and accountable governance, in the empowerment of people to better exercise their rights and hold leaders to account; and in support of equitable development including improved livelihoods, health, and access to education. The book provides development practitioners with an overview of the key policy and regulatory issues involved in supporting freedom of information and expression and enabling independent public service media. Country examples illustrate how these norms have been institutionalized in various contexts. The NAB Engineering Handbook is the definitive resource for broadcast engineers. It provides in-depth information about each aspect of the broadcast chain from audio and video contribution through an entire broadcast facility all the way to the antenna. New topics include Ultra High Definition Television, Internet Radio Interfacing and Streaming, ATSC 3.0, Digital Audio Compression Techniques, Digital Television Audio Loudness Management, and Video Format and Standards Conversion. Important updates have been made to incumbent topics such as AM, Shortwave, FM and Television Transmitting Systems, Studio Lighting, Cameras, and Principles of Acoustics. The big-picture, comprehensive nature of the NAB Engineering Handbook will appeal to all broadcast engineers—everyone from broadcast chief engineers, who need expanded knowledge of all the specialized areas they encounter in the field, to technologists in specialized fields like IT and RF who are interested in learning about unfamiliar topics. Chapters are written to be accessible and easy to understand by all levels of engineers and technicians. A wide range of related topics that engineers and technical managers need to understand are covered, including broadcast documentation, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management. The NAB Engineering Handbook provides detailed information on virtually every aspect of the broadcast chain, from news gathering, program production and postproduction through master control and distribution links to transmission, antennas, RF propagation, cable and satellite. Hot topics covered include HD Radio, HDTV, 2 GHz broadcast auxiliary services, EAS, workflow, metadata, digital asset management, advanced video and audio compression, audio and video over IP, and Internet broadcasting. A wide range of related topics that engineers and managers need to understand are also covered, including broadcast administration, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management. Basic principles and the latest technologies and issues are all addressed by respected professionals with first-hand experience in the broadcast industry and manufacturing. This edition has been fully revised and updated, with 104 chapters and over 2000 pages. The Engineering Handbook provides the single most comprehensive and accessible resource available for engineers and others working in production, postproduction, networks, local stations, equipment manufacturing or any of the associated areas of radio and television. This handbook is intended to give the broadcast industry an authoritative guide to the Radio Data System (RDS), also called Radio Broadcast Data System (RBDS). Since the standard's adoption, about 700 stations have begun broadcasting RDS in the United States. There is a wide variety of encoding equipment with prices starting as low as \$400, and over 30 models of RDS receivers have been introduced for cars, home receivers, portable and even PC receivers. Automobile manufacturer's such as General Motors, Ford, Audi, and Porsch now offer RDS on new vehicles. Yet despite all the support equipment in place, the FM broadcaster has been reluctant to implement and utilize this service, mainly because of a lack of understanding of what RDS can do for the station. This book finally provides the information required to understand RDS and its possibilities on a variety of levels, so that everyone involved in radio can make the most of it. Station owner, program director, salesperson, and talent alike will find the information he or she requires to maximize the possibilities of this new technology. Each feature of the system is explained in terms of its practical implementation at the station, and interviews with broadcasters currently using the system add a hands-on perspective. Scott Wright is a recognized pioneer in RDS development. As the designer of Delco Electronics' first RDS receiver, he has been extremely active in the development of the RDS standard in the US and in efforts to educate the broadcast community about its potential. He has represented Delco at the European Broadcasting Union's (EBU) RDS Forum and is currently the Chairman of the National Radio Systems Committee RBDS Subcommittee, the US standard-setting body. He is also a member of the Electronics Industries Association's (EIA) RDS Forum. Joe Maltz's career as a broadcast engineer with the American Broadcasting Company spanned thirty-seven years and was followed by five years as a consultant to the television industry. In his memoir, My Adventures in Broadcasting, he takes a look back at his experiences during television's "golden years" from the usually invisible point of view of an engineer. Maltz participated in the technical preparation and execution of five Olympic Games, including the 1972 Munich Olympics, during which he covered the tragedy that unfolded there. For his engineering work on Olympic technical design, he won two Emmys. He also covered four political conventions and the first televised coverage of a Russian-American track meet in Moscow, which took place during the Cold War. Over the years memoirs about television broadcasting have been written and published by many notables in the industry. These memoirs recall events from an "on-air" perspective, ignoring the participation of the technical people that enabled these events to be successfully produced and executed. My Adventures in Broadcasting offers a unique, behind-the-scenes perspective on television coverage of major news and sporting events fills that void.
