Excerpt from Questions and Answers From the Gas Engine The greatest development of the gas and gasoline engine has been within the last decade. During that time hundreds of skilled mechanics and designers have been devoting their entire energies to the developments of improved designs and improved methods of construction of engines belonging to the internal-combustion type. The most progressive of these men have been readers of The Gas Engine, a magazine devoted to the gas engine industry, which was

established in 1898. Many hundreds of them have asked questions which were answered through the columns of the magazine by the best authorities in the gas engine world. Believing that these questions and answers have a permanent value compiled in a separate volume, we have collected the majority of the inquiries and their, answers in the present book. While it has been almost impossible to separate these questions along any well-divided lines, yet an effort has been made to place together those questions of similar nature. For instance, questions which related primarily to trouble with engines are placed together. Theoretical questions of design, formulas, etc., are collected together.
