Astronomy and Astrophysics Abstracts, which has appeared in semi-annual volumes since 1969, is devoted to the recording, summarizing and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union (according to a resolution adopted at the 14th General Assembly in 1970). Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals, compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume II contains literature published in 1974 and received before August 15, 1974; some older literature which was received late and which is not recorded in earlier volumes is also included. Beginning with this volume some minor changes of our classification scheme have been made. We acknowledge with thanks contributions to this volume by Dr. J. Bouška, who surveyed journals and publications in the Czech language and supplied us with abstracts in English, and by the Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.), Sydney, for providing titles and abstracts of papers on radio astronomy. New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture. "Electrons and chemical bonding: This standard textbook on quantum chemistry is easy to understand even for chemists; its basic concepts never become obsolete. Well done didactically, concise and to-the-point." Prof. Dr. Ralf Steudel, TU Berlin Research into active galactic nuclei (AGN) - the compact, luminous hearts of many galaxies - is at the forefront of modern astrophysics. Understanding these objects requires extensive knowledge in many different areas: accretion disks, the physics of dust and ionized gas, astronomical spectroscopy, star formation, and the cosmological evolution of galaxies and black holes. This new text by Hagai Netzer, a renowned astronomer and leader in the field, provides a comprehensive introduction to the theory underpinning our study of AGN and the ways that we observe them. It emphasizes the basic physics underlying AGN, the different types of active galaxies and their various components, and the complex interplay between them and other astronomical objects. Recent developments regarding the evolutionary connections

between active galaxies and star-forming galaxies are explained in detail. Both graduate students and researchers will benefit from Netzer's authoritative contributions to this exciting field of research. Aus den Besprechungen: "Mit dem Wechsel der seit Jahrzehnten üblichen Bezeichnungen Technologie oder Werkstoffkunde in "Werkstoffwissenschaften" ändert sich mit der vorliegenden Broschüre auch Beschreibung, Darstellung und Erklärung der jungen Wissenschaft. Neu und neuartig sind dabei einmal Stoffzusammenstellung, Bilder, Diagramme, Tabellen, und zum anderen die Kürze der Darstellung und die nüchterne sachliche Sprache. ... Es ist verblüffend und auch erfreulich, wie der Verfasser auf wenigen Seiten neuere technologische Zusammenhänge erklärt, Formeln deutet, Diagramme und Abbildungen in den Text mit einbezieht... ." wt-Zeitschrift für industrielle Fertigung#1 "... Der Text wird durch zahlreiche sehr gute Diagramme, Bilder und Übersichten ergänzt. Das Buch, das auf Vorlesungen für Studienanfänger der Werkstoffwissenschaften, des Chemieingenieurwesens und der Elektrotechnik beruht, eignet sich nicht nur für den studentischen Nachwuchs, sondern ebenso für den in der Praxis stehenden Ingenieur, der sich mit Werkstofffragen zu befassen hat. Die "Werkstoffwissenschaften" bilden eine wertvolle Ergänzung der bereits auf diesem Gebiet vorhandenen Literatur." Unsere Duisburger Hochschule#2 At the American Chemical Society meeting in Philadelphia, Pennsylvania, U.S.A., a symposium was organized entitled, "Comparison of Ab Initio Quantum Chemistry with Experiment: State-of-the-Art." The intent of the symposium was to bring together forefront experimen talists, who perform the types of clean, penetrating experiments that are amenable to thorough theoretical analysis, with inventive theore ticians who have developed high accuracy ab initio methods that are capable of competing favorably with experiment, to assess the current applicability of theoretical methods in chemistry. Contributions from many of those speakers (see Appendix A) plus others selected for their expertise in the subject are contained in this volume. Such a book is especially timely, since with the recent develop ment of new, more accurate and powerful ab initio methods coupled with the exceptional progress achieved in computational equipment, ab initio quantum chemistry is now often able to offer a third voice to resolve experimental discrepancies, assist essentially in the interpre tation of experiments, and frequently, provide quantitatively accurate results for molecular properties that are not available from experiment.
