[American Finance for the 21st Century](#) Dec 22 2019 As recently as thirty years ago, Americans lived in a financial world that today seems distant. Investment and borrowing choices were meager: virtually all transactions were conducted in cash or by check. The financial services industry was heavily regulated, as an outgrowth of the Depression, while an elaborate safety net was constructed to prevent a repeat of that dismal episode in American history. Today, consumers and businesses have a dizzying array of choices about where to invest and borrow. Plastic credit cards and electronic transfers increasingly are replacing cash and checks. Much regulation has been dismantled, although the industry remains fragmented by rules that continue to separate banks from other enterprises. Meanwhile, finance has gone global and increasingly high-tech. This book, originally prepared as a report to Congress by the Treasury Department, outlines a framework for setting policy toward the financial services industry in the coming decades. The authors, who worked closely with senior Treasury officials in developing their recommendations, identify three core principles that lie at the heart of that framework: an enhanced role for competition; a shift in emphasis from preventing failures of financial institutions at all cost toward containing the damage of any failures that inevitably occur in a competitive market; and a greater reliance on more targeted interventions to achieve policy goals rather than broad measures, such as flat prohibitions on certain activities.

[Enforcement issues of accounting principles in China Sep 11 2021](#) Project Report from the year 2007 in the subject Business economics - Accounting and Taxes, grade: 85%, Macquarie University (Graduate Accounting and Commerce Centre), course: International Accounting (post-graduate unit), 13 entries in the bibliography, language: English, abstract: In the 21st century, globalisation is deemed inevitable in the development of the world economy. As commercial language, accounting information is internationally accepted so that control over accounting issues and the prevention of accounting fraud are critical to economic development (China Accounting Standards Committee, 2007). In this context, financial reporting quality is regarded as an endogenous function of market demands and political influences that are specific to each country (Chen & Cheng, 2007). The participation of Chinese companies in the world economy has grown during recent decades at a pace that surpasses all other economies significantly. Nevertheless, areas such as accounting and auditing remain a concern. China fully understands that a sound financial reporting system plays a key role in the process of economic development (Financial Reporting in Mainland China, 2007). In saying so, it is important to mention that it is not the standards itself that seem problematic but rather the enforcement of standards. Based on a report written in 2003, this analysis will present aspects that can be a concern with regard to enforcement of accounting standards. After describing each point, an update to what extent it has been resolved will be given. Finally, this report will highlight new enforcement issues that have arisen since 2003 before concluding with an outlook concerning China's future in the field of accounting.
